

step up to the cloud
of infinite possibilities.

sifycloudinfinite[®]

It's time to redefine your success. With the power of Cloud computing and sify's expertise of converged ICT services at your disposal, infinite opportunities await you. Sify Cloudinfini, the enterprise grade cloud offering from sify, helps you do business seamlessly on a larger scale, with lesser cost and minimum investment. Now, you can leverage the power of virtualization, massive scalability, enterprise security and intelligent management layer with sify cloudinfini.

The integrated approach of Sify Cloudinfini provides you enterprise grade services supported by fully owned Tier III data center and MPLS network across India. Moreover, the unique features make you nimble footed in the market embracing change as it comes, and helping you stay ahead of the competition.

Unique features that will change the way you work

On-demand delivery of IaaS & PaaS

Sify Cloudinfini gives you state-of-the-art Tier III IT infrastructure and platforms to work as and when needed, so that you are free from hardware availability concerns.

Virtual Private Data Centre (VPDC)

Sify VPDC framework offers a choice of all the infrastructure components required to build the most demanding enterprise IT setup from single tier application architecture to highly secure three-tier architecture on pay-per-use model.

Highly secure Disaster Recovery (DR) solutions

Leverage enterprise-grade Public/Private/Hybrid Cloud environments hosted in Sify's Tier III next-gen Data Centres, thus allowing you to create DR solutions and system redundancy across different seismic zones.

Converged Network and Security

Accessibility over public and private network and support for all modes of connectivity in seamless manner.

Highly Secure Cloud

India's first cloud service provider to receive SSAE-16 (SOC-2) accreditation, an added advantage for enterprises in compliance driven environment for running their setup on SSAE Certified environment.

Public/Private/Hybrid

It's your choice. Choose the model of delivery of your choice, which works best with your business and delivers results par excellence.

India's first 'vCloud-powered' service

Sify Cloudinfini, offers on-demand cloud services built on fully compliant, inter-operable, secure and proven VMware technology.

Integrated ICT Partner

A unique ICT partner that offers you industry leading SLA guarantee - 99.8% quarterly uptime.

Sify Cloudinfini.

Transforming your organization to create business value.

Infrastructure-as-a-Service on enterprise-grade cloud platform

Turn to IaaS from Sify and free yourself from the burden of planning, implementing and maintaining an IT infrastructure. Sify Cloudinfini offers highly elastic, enterprise-grade, durable, scalable and robust IT infrastructure complete with servers, network and storage, on-demand, self-provisioned in minutes on pay-as-you-go model. Housed in Sify's state-of-the-art Level-III Data Centres, the platform offers the degree of redundancy required to meet specific availability needed by your mission-critical applications. Furthermore, this is managed by highly skilled and efficient cloud experts on 24x7 basis. All this so that now you can do more with less and scale as your business grows.

Compute: Virtual and Dedicated servers on cloud, enabling rapid provisioning are available on variety of configuration and billing plans, to deliver maximum density, cost efficiency and improved application performance.

Enterprise-grade Storage: Integrated, information-focused and automated tiered storage infrastructure available on flexible-need based subscription, from 1GB to multiple TBs. Combining the capabilities of SAN and NAS to increase data consolidation and storage utilization, the service provides unmatched performance, reliability and endurance in enterprise applications.

Security and Compliance: Sify Cloud provides a highly secure framework for your data and mission-critical applications, with an architecture designed to help meet today's critical compliance and certification requirements, including Firewall + IPS, DDOS, SSL, VA/PT, RSA and 2Factor Authentication, etc. For large enterprise customers requiring more comprehensive compliance and security services on the cloud, Sify has a team of information security and compliance experts that can work with you.

Protection: Fully managed enterprise class advanced Data Protection and Replication through tape backup, 2 site sync, off-site vaulting, encryption including ready DR/synchronization, that provides fast backups, tiered storage, maximum data protection and rapid restore for a wide variety of applications, databases and operating systems.

Network: Diverse networking capabilities for Internet/ IPVPN/MPLS Connectivity including router, load balancer, SSL offload, GSLB, etc. to ensure seamless integration with your own existing private network.

Disaster Recovery: Providing DR on Cloud, comprehensive, affordable and non-disruptive BC/DR solution with an ability to tailor to your business needs, that offers continuous data protection for your systems and data on our secure enterprise cloud platform at geographically distant location.

Analytics: Extensive health monitoring options across systems, OS, DB and Network to optimize the performance of business-critical applications and infrastructure, including an intuitive web-based self-service portal for provisioning, managing and monitoring of your cloud services and resources.

PaaS for unparalleled platform flexibility, control and choice

Sify PaaS solution offers base environment ready for deploying customer applications. The platform services offered across operating systems, database, and middleware addresses several complexities involved in setting up software environment. What's more, you can also 'Bring Your Own License' (BYOL) and migrate easily to public and private clouds.

SaaS for smart business solutions

Now, you can forget about the complexities of software licenses, upgradations, renewals, installations, and even the dilemma of piracy. Cloud services by sify provides SaaS, smart business solutions resting on the cloud, available on pay-per-use basis.
